

1. 劳动力市场均衡水平: $MRL = \frac{W}{P}$ (边际产出 = 实际工资)

$$r = \frac{\partial Y}{\partial K}, \quad w = \frac{\partial Y}{\partial L}$$

(实际利率) (实际工资)

企业利润 $\pi = Y(K, L) - r \cdot K - w \cdot L$, 有 $\frac{\partial \pi}{\partial w} = \frac{\partial \pi}{\partial r} = 0$ (存疑)
